SAFETY PRECAUTIONS

GENERAL GUIDELINES

1. It is advised to insert an isolation transformer in the AC supply before servicing a hot chassis.
2. Potentials as high as 33KV are present when this receiver is in operation. Operation of the receiver without the rear cover involves the danger of a shock hazard from the receiver power supply. Servicing should not be attempted by any one who is not competent with the precautions necessary when working on the high voltage equipment. Always discharge the anode of the tube.
3. When servicing observe the original lead dress in the high voltage circuits. If a short circuit is found , replace all the parts which have been overheated or damaged by the short circuit.
4. always use the manufacturer's replacement safety components. The critical safety components marked with ∇ on the schematics diagrams should not be by other substitutes. Other substitute may create the electrical shock , fire or other hazards. Take attention to replace the spacers with the originals. Furthermore where a short circuit has occurred , replace those components that indicate evidence of overheating.
5. After servicing , see that all the protective devices such as insulation barriers, insulation papers, shields and isolation R-C combinations are correctly installed.
6. When the receiver is not being used for a long time of period of time , unplug the power cord from the AC outlet.
7. After servicing make the following leakage current checks to prevent the customer from being exposed to shock hazard.

LEAKAGE CURRENT COLD CHECK

1. Unplug the AC cord and connect a jumper between the two prongs of the plug.
2. Turn the receiver's power switch.
3. Measure the resistance value with an ohmmeter, between the jumpered AC plug and each exposed metallic cabinet part on the receiver, such as screw
- 4.

heads, aerials, connectors , control shafts etc. When the exposed metallic part a return path to the chassis the reading should be between 4Mohm and the 20Mohm. When the exposed metal does not have a return path to the chassis, the reading must be infinite.

LEAKAGE CURRENT HOT CHECK

1. Plug the AC cord directly in to the AC outlet. Do not use an isolation transformer for this check.
2. Connect a 2Kohm 10W resistor in series with an exposed metallic part on the receiver and an earth, such as a water pipe.
3. Use an AC voltmeter with high impedance to measure the potential across the resistor.
4. Check each exposed metallic part and check the voltage at the each point.
5. Reverse the AC plug at the outlet and repeat each of the above measurements.
6. The potential at the any point should not exceed 1.4 Vrms. In case a measurement is outside the limits specified , there is the possibility of a shock hazard , and the receiver should be repaired and rechecked before it is returned to the customer.

Figure 1

X-RAY RADIATION WARNING

The primary source of X-ray radiation in this receiver is the picture tube. The chassis is specially constructed to limit X-ray radiation. For continued X-ray radiation protection, replace the tube with the same type of the original one.

CAUTION

SHORT CIRCUIT THE ANODE OF THE PICTURE TUBE AND THE ANODE CAP TO THE METAL CHASSIS, CRT SHIELD, OR THE CARBON PAINTED ON THE CRT, AFTER REMOVAL OF THE ANODE CAP.

TECHNICAL SPECIFICATIONS AND THE FEATURES

Power source:	230-240V AC ,50-60Hz	
Power consumption:	175 W	28" 4:3 / 28" 16:9 SF
	180 W	28" 16:9 PF
	180 W	29" 4:3 SF
	185 W	29" 4:3 PF
	185 W	32" 16:9 SF
	190 W	32" 16:9 PF
	200 W	33" 4:3
Stand by Power consumption :	5 W (For all sizes)	
Audio Outputs :	2 x 12 W RMS at %10 THD (For all sizes)	
Aerial impedance :	75Ohm, Coaxial type	
Receiving system *:	PAL BG PAL SECAM BG PAL SECAM BG DK/DK' PAL SECAM BG LL' PAL I	
Receiving channels:	VHF BAND I , CH2-4 VHF BAND III , CH5-12 CATV CHANNLES S1-S41 UHF BAND CH21-69	
Sound systems :	Mono/Stereo/NICAM (optional)	
Grid 2 voltage :	0-1400V	
Heater voltage :	6.3±0.2Vrms	
Operating temperature :	0-45 Degrees	
Safety	: IEC 65 /BS P2N	
X-Ray radiation	: ACC. IEC 65/BS P2N	

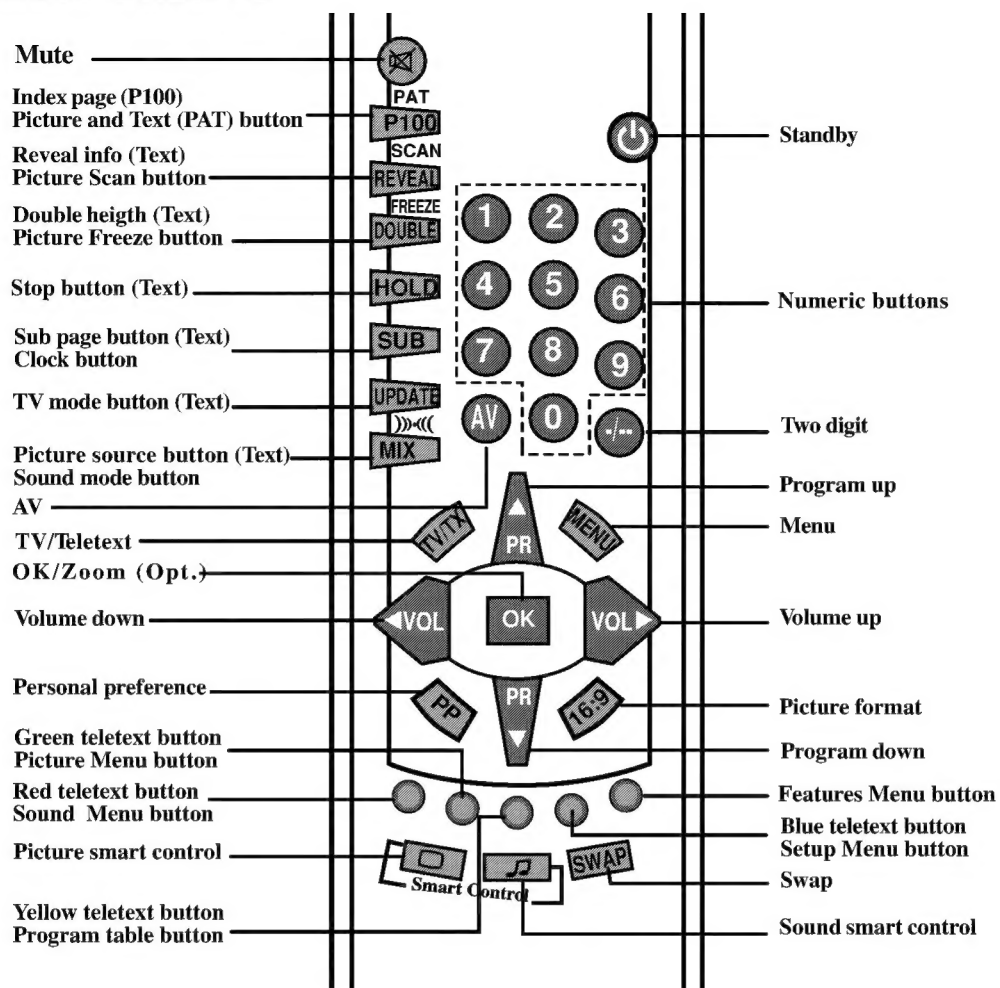

- : TV set is produced to receive "one" of this colour and sound systems options which is based one your countries norms and can not be changed by user except BG/DK and BG/LL' if both systems are available to receive (BG or DK and BG or LL').

NOTE : Using a subwoofer causes 20 W extra power consumption and supplies maximum 20 W extra sound output.

Special features

- 100 Hz digital scan.
- 9 page teletext.
- Fasttext and/or Toptext (Optional).
- Letterbox, Subtitle 1 & 2, 16:9, 14:9 picture formats (for Widescreen TV sets) (Optional).
- Digital Colour Transition Improvement (DCTI).
- Digital Comb Filter (DCF) (Optional).
- Digital Luminance Transition Improvement (DLTI).
- Manual degaussing (Optional).
- Scan Velocity Modulation (SVM.) (Optional).
- Dynamic Focus (Optional).
- 3 step Zoom function (Optional).
- Picture freeze function
- Automatically switch to stand by in five minutes after a channel ceases to transmit or selecting a channel which has no transmission (Auto off function).
- Virtual Dolby surround (Optional).
- Subwoofer (optional).
- Dynamic Bass Enhancement (Optional).
- Back audio out.
- 5 band graphic equaliser.
- Automatic Volume Limiting (AVL).
- Programme Editing Table.
- Naming the channels.
- Your TV can receive stereo channels directly (NICAM optional).
- Automatic tuning system with country selection (ATS).
- 100 Programme Memory.
- Cable/Hyperband tuner.
- Manual Fine Tuning.
- Child Lock.
- Return to the last channel viewed (SWAP).
- Normalisation system to recall the setting in memory after the volume, colour, contrast, brightness settings have been changed (PP).
- Picture adjustment using one button (Picture Smart Control).
- Sound adjustment using one button (Sound Smart Control).
- Advanced On Screen Display.
- Infrared Remote Control.
- Programmable on/off timer.
- Multi language menu system (10).
- Stereo headphone socket.
- 2 Scart Sockets: Video cassette recorder, satellite receiver, video disc player, DVD, TV games or a home computer can be connected to this AV socket with an appropriate connecting cable (3rd Scart socket is optional).
- S-Video connection.
- Audio/Video RCA sockets.

Remote control

Using the TV

Turning on for the first time and Tuning

TV controls

Stand-By mode

When your TV is working on, press the red “STAND-BY” button on the right upper corner of your remote control to switch off and the Stand-By indicator (Led) will be brighter. To turn on your TV again, press one off the numeric buttons, **Program up** or **Program down**.

Please Note: If you will not use your TV for a long time, do not leave it on Stand-By mode, instead switch it off from the power button on the front panel of the TV set. If you always leave your TV on Stand-By mode, demagnetization process will not occur and that will cause coloring problems. If you occurs, press the power button to switch off your TV and wait until it cools off.

Programme selection

Press the **Program up** or **Program down** buttons on the TV or remote control or press a **Numeric** button to select a programme.

To select a programme whose number is greater than 9 using the numeric buttons, press the **/--** button first and then press the two **Numeric** buttons. For example, to select programme 12, press the **/--** button followed by **1** and then **2**.

You can also select a program by pressing in the Yellow button to see the Program Table.

PROGRAM TABLE		
P00	P005	P010
P01 ITU	P006	P011
P02 TV4	P007	P012
P03 CNN	P008	P013
P04 BBC1	P009	P014
SKIP MODE NAME DELETE		

Use the **Program up** and **Program down** buttons to scroll through the programme numbers. When you find the program number you want press the **OK** button again.

Press the **TV/TX** button to close the Program Table.

Volume

Press the **Volume +** or **Volume -** button on the TV or the **Vol ◀** or **Vol ▶** button on the remote control. A sound level bar will appear on the screen.

Mute

To mute the sound press the **Mute** button on the remote control. A loudspeaker symbol will appear on the screen.

Press the **Mute** button again to restore the sound. The symbol will disappear.

Pressing **Volume up** buttons will also restore the sound. But pressing the **Volume down** button will increase the volume without restoring.

PP

Personal preference. Press the **PP** button to revert to the default settings for the TV. (See TV setup).

Swap

Select the programme you would like to recall by pressing **SWAP** button. Selected programme number will appear on the upper left side of the screen. While watching any programme, you can recall the selected one by pressing **SWAP** button again. If you press swap button again you can recall the last programme you watched. You can cancel **SWAP** function by pressing **MENU** button.

PR 01 ➔  PR 11 ➔ PR 12 ➔ PR 13... ➔  PR 01

AV

Your TV has 2 (3. scart opt.) scarts so every time you press your AV button, your input will change as follows:

- 1 AV1 when using SCART socket 1 (RGB support) (Option).
- 2 AV2 when using SCART socket 2.
- 3 AV3 when using SCART socket 3 (RGB support) (Optional).
- 4 AV3-S for S-Video equipment to scart 3 (S-VHS/Scart adapter is needed).
- 5 AV4 when using the RCA sockets of the TV.
- 6 AV4-S when using the S-video socket.

Press the **AV** button again to return to TV.

Tuning the television

There are two ways of tuning your television: Manual, where you control the tuning process or

Autoprogram where the television does it all automatically.

Your TV will sort all the channels with the ATS. Sorting will be performed in the following order:

- a- Selected country's channels with teletext and channel names.
- b- Selected country's channels with teletext and without channel names.
- c- Selected country's channels without teletext.
- d- Foreign channels with teletext and channel names.

Please Note

If the TV is set to a channel with no signal the TV will return to standby in 5 minutes. The last minute remaining is displayed on the screen.

Automatic tuning (Autoprogram)

There are two ways to access the SETUP menu:

Press the blue **Setup** button.
or
Press the **Menu** button and use the **Program down** button to select **SETUP** Press the **OK** button to enter the **SETUP** menu.

Please note

The system will displayed automatically on SYSTEM row i.e.BG, L, I, DK depending the receiving broadcasting system of the country. In some countries the broadcasting system can be both in BG/DK or BG/LL'. Only the TV sets produced with Pal Secam BG/DK or Pal Secam BG/LL' systems can receive both BG/DK or BG/LL' broadcasts. In this case the user can select the required SYSTEM using **Volume up/down** buttons.

Please note

If you do not press any buttons for 15 seconds the TV will exit the menu system.

Use the Program down button to select AUTOPROGRAM and press the OK button. A list of countries will appear. Select the desired country using **Program** and **Volume** buttons.

When you are sure the aerial is connected properly press the **OK** button. Autoprogram will start. AUTOPROGRAM will flash.

To cancel Autoprogram whilst it is working press the **Menu** button repetitively.

As Autoprogram stores a channel it will appear briefly on the screen before the search continues.

Your TV is now tuned and ready to use.

Please note:

If auto sort fails to arrange the programmes in the required sequence please refer to programme organising.

Manual tuning

If you want to tune manually:

In the Setup menu select PROGRAM NO using the **Program down** button and use the **Volume up** button to change the Program No to 01.

Starting with Program 01, tune in the first channel as follows:

Use the **Program down** button to select SEARCH.

Press the **Volume up** or **Volume down** button to start the tuning search.

When the search finds a strong channel signal it will stop searching. The picture will appear.

Use the **Program down** button to select PROGRAM NO.

Use the **Volume up/down** or numeric buttons to select the desired programme number.

Use the **Program down** button to select STORE. Press the **OK** button and STORED will appear on the STORE line.

You have now stored the first channel.

Use the **Program up** button to select again SEARCH and continue the tuning procedure until you have tuned in all the programmes you want or the television can receive.

Tuning with channel numbers

Enter the SETUP menu by pressing the blue button.

Press **OK** button when CHANNEL row is blue.

Use OK button to select “S” for cable channels and “C” for terrestrial broadcast.

Enter the channel number using the Numeric buttons or use the **Volume up/down** buttons on your remote control.

Use the **Program down** button to select PROGRAM NUMBER.

Use the **Volume up/down** or numeric buttons to select the desired programme number.

Use the **Program down** button to select STORE. Press the **OK** button and STORED will appear on the STORE line.

You have now stored the first channel.

Use the **Program up** button to select again CHANNEL and continue the tuning procedure until you have tuned in all the programmes you want or the television can receive.

To exit the SETUP menu press the TV/TX button.

Fine tuning

Although the search and Autoprogram will automatically try and tune to the best reception, in areas of poor reception a bit of fine tuning may be required.

In the SETUP menu use the Program up/down buttons to select FINE TUNING. Use the Volume up and Volume down buttons to fine tune.

When you have finished use the **Program down** button to select STORE and press the **OK** button.

Program organising

Once you have tuned in all the channels you want, you can change their programme number, if required, and name them.

To enter the PROGRAM TABLE menu press the **Menu** button and select PROGRAM TABLE and press the **OK** button or press directly the **Yellow** button.

PROGRAM 01 will be selected and the channel stored under PROGRAM 01 will be shown on the screen.

The details of the program will be shown across the top of the screen i.e. P1 CH31.

The buttons used to edit the programs are shown at the bottom of the display:

Blue button	-	Name
Green button	-	Move
Pink button	-	Delete
Red button	-	Skip

To name the programmes

Press the **Blue** button, the selected line will turn blue and the CH will be highlighted.

Use the **Program up** and **Program down** buttons to select the letters and numbers and the **Volume up** and **Volume down** buttons to move through the name.

Press the **Blue** button again to store the name.

Repeat this process to name all the programmes.

Please Note

Some TV channels may send their names with teletext transmission. In this case their names will be automatically shown on the name line.

To move the programmes

You can move the programmes around the programme list to the order you want

Select the programme you want to move and press the **Green** button. The programme will turn to yellow. Select the number you want to move and press the **Green** button again and the programme will be moved to that number.

All the following programmes are shifted down by one place.

To delete a programme

To delete a programme, select it and press the **Pink** button.

The programme will be deleted.

All the following programmes are shifted up by one position.

To skip programmes

Skipped programmes will not appear when you move through the program list using the **Program up/Program down** buttons.

They can still be selected using the numeric buttons or the OK button.

Select the programs you want to skip and press the **Red** button. The program will turn red. To unskip the program press the **Red** button again.

To exit the PROGRAM EDIT press the **TV/TX** button once or the **Menu** button twice.

When you select a programme, the information you entered in the PROGRAM EDIT menu will appear on the top of the screen i.e. P1 BBC1. This will disappear after about three seconds.

TV set up

The TV set up is accessed through a menu system.

Once you have stored your set up, this is the set up the TV will default to when you switch it on.

To enter the MAIN menu press the **Menu** button.

Once in the MAIN menu use the **Program up** and **Program down** buttons to select items in the menu and the **OK** to access sub menus or use the coloured fastext buttons for quick access.

Red button - SOUND
Green button - PICTURE
Pink button - FEATURES

Please note

If you do not press any buttons for 15 seconds the TV will exit the menu system.

Sound menu (red button)

Select the required item in the menu using the **Program up/down** buttons and make the changes pressing **Volume up/down** buttons. Use the **OK** button to enter **HEADPHONE** and **SOUND FEATURES** sub menus.

Volume

Sets default volume using the **Volume up** and **down** buttons.

To save your settings, select **STORE** and press the **OK** button. **STORED** will be displayed. Press the **Menu** button to go back to the previous menu.

Balance

Sets the sound balance mode using the **Volume up** and **down** buttons

To save your settings, select **STORE** and press the **OK** button. **STORED** will be displayed. Press the **Menu** button to go back to the previous menu.

Sound type

This item shows **STEREO** when receiving stereo transmission and **MONO** for mono transmissions.

The TV can be produced to receive the **NICAM** broadcasts as a optional feature.

If the channel you are watching is in **Nicam stereo** the **On Screen Display** will show **NICAM STEREO** for a while.

Please Note

If, while watching a **nicam stereo** channel, the signal strength drops and the system cannot receive **nicam stereo** the **OSD** will show **MONO**. If the signal strength increases again and **nicam stereo** can be received again, the **OSD** will show **NICAM STEREO**.

Dual I/II

Some broadcasters supply the programmes in two languages. To able to listen the second language select **DUAL II** by **SOUND TYPE** using **Volume up/down** buttons.

To save your settings, select **STORE** and press the **OK** button. **STORED** will be displayed. Press the **Menu** button to go back to the previous menu.

Headphone

You can set up the volume, balance, bass treble and sound type (stereo or mono) of the headphone output.

Use **OK** button to enter the HEADPHONE menu.

To save your settings, select STORE and press the **OK** button. STORED will be displayed. Press the **Menu** button to go back to the previous menu.

Sound Features

You can set up the Sound Mode, AVL Mode Dynamic Bass (Optional), Subwoofer (Optional) and Equalizer from **Sound Features** menu.

To access the **Sound Features** menu press the **Red** button on the remote control and press **Volume down** button to select **Sound Features**.

Press **OK** to enter the Sound Features.

Sound mode

You can select NORMAL, SPATIAL or DOLBY VIRTUAL (optional) using the **Volume up/down** buttons.

SPATIAL sound is an 'expanded stereo'. It gives the impression that the two speakers in the TV are further apart than they really are.

DOLBY VIRTUAL is based on Dolby Pro Logic decoding for production of the Left, Right, Centre and Virtual Surround Sound channels using two loudspeaker.

® "DOLBY", "VIRTUAL DOLBY SURROUND" and  the double-D symbols are trademarks of Dolby Laboratories Licensing Corporation.

Please Note

To get the surround effects in Virtual Dolby mode, you must apply a Dolby Pro Logic coded input to the TV.

You can't adjust the AVL and EQUALIZER in DOLBY VIRTUAL mode.

AVL

TV transmitters have different sound levels. AVL (automatic volume limiting) maintains the same sound level as you switch from program to program.

To apply this press **Volume up** or **down** button and select **ON** for AVL in **Sound Features** menu.

Dynamic Bass (Optional)

To give depth effect to bass sound you can select **Dynamic Bass** as **ON**.

To supply this press **Volume up** or **down** button and select **ON** for **Dynamic Bass** in **Sound Features** menu.

Note: If you select Dynamic Bass as ON Subwoofer will also be automatically ON. (If the set has subwoofer option).

Equalizer

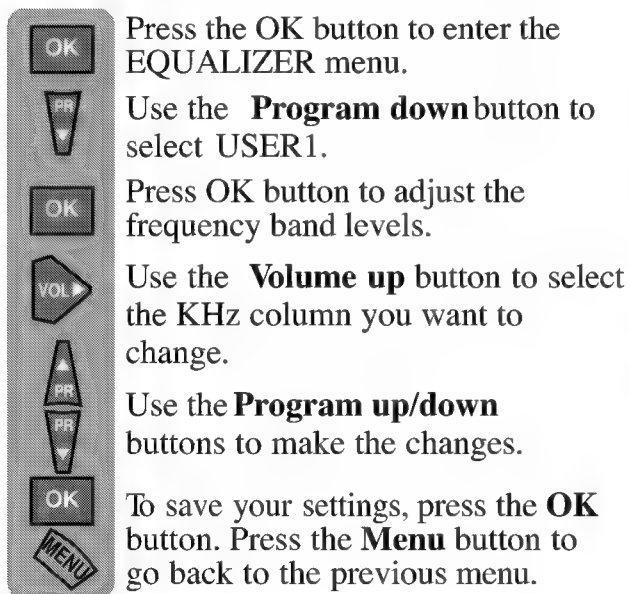

To access the 5 band equalizer menu press **Volume up** or **down** button and press **OK** on the **Equalizer** line.

In this menu there are a series of preset equalizer settings for different types of sound output.

There are four music settings - MUSIC, SPORTS, CINEMA, SPEECH and USER1 & USER2 modes.

USER modes allow you to set your own sound outputs as follows:

You can also adjust the settings of USER2 by the same method.

You can change the equalizer setting whilst watching the TV using the sound Smart control.

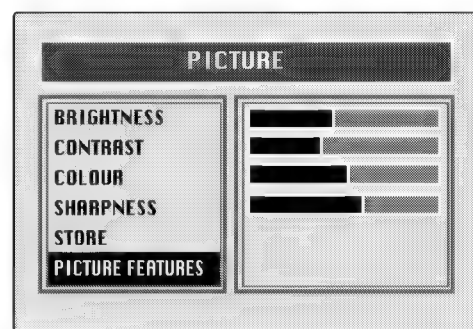

Once you have switched the TV off the equalizer setting will revert to the stored setting.

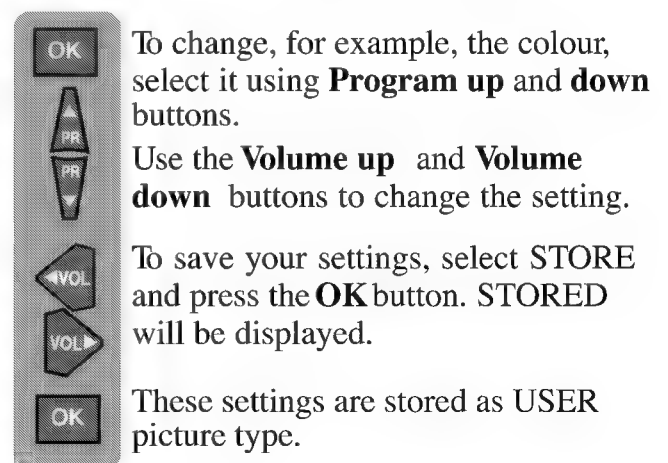

To exit the sub-menu press the **Menu** button and return to the main menu.

Picture menu (Green button)

The picture menu allows you to set up the following:

BRIGHTNESS
CONTRAST
COLOUR
SHARPNESS
and the other PICTURE FEATURES

You can change the picture type whilst watching the TV using the picture Smart control.

Picture Features

In the picture menu use the **Program down** button to select **PICTURE FEATURES** and press OK.

In this menu you can adjust the picture quality features.

Use the **Program up** and **down** buttons to select your desired picture feature and use **Volume up** and **down** buttons to adjust this feature.

NOISE REDUCTION: You can reduce the noise effects in the pictures by selecting low, medium or high.

CTI (Colour Transient Improvement):

You can improve the colour transitions in the picture by selecting ON or OFF.

IMPORTANT NOTE: Your TV has Digital Comb Filter and DLTI (Digital Luminance Transient Improvement) features to improve picture quality. These features are set ON and they can not be changed by the end user.

Features Menu (Purple button)

To select **Features** menu press the menu button and using the **Program up** and **down** buttons select **Features**.

You can also select the **Features** menu directly by pressing the **purple** button on the remote control.

The **Features** menu allows you to set up the following:

CHILD LOCK
BACK GROUND
BLUE BACK
DEGAUSS (opt.)
AV OUT
LANGUAGE
TIMER

Use the **Program up** and **down** buttons to select the feature you wish to change and use **Volume up** and **down** buttons to adjust this feature.

Child Lock: Using the **Child Lock**, you can lock any Program you want so that adult channels can not be watched by children.

You can cancel child lock any time you want. To cancel **Child Lock**, select **Child Lock** as OFF when you are watching that program.

Blue Back: When there is no broadcast, you can select the background purely blue instead of snowy picture.

Select **blue back** as ON.

Degauss (Optional): If you leave your TV on stand-by mode for a long time or because of strong electro-magnetic field sources, there may be cloudy effects over the picture.

To prevent such effects select **DEGAUSS** and press **Volume up** button.

DEGAUSS will be ON for a short time, the screen will be cleaned and **DEGAUSS** will be OFF again.

Scart Source: You can select the output from your TV to the devices connected to your 2nd and 3rd scarts. So if you want to record or copy the program you are watching, you should output this program to AV2 or AV3, inputs.

The following options are possible

- TV→AV2 & AV3: The current program you are watching,
- TUNER →AV2 & AV3: The program you have last selected,
- AV1, AV2, AV3, AV3-S, AV4, AV4-S→AV2 & AV3: The devices connected to these inputs; are output to the 2nd and 3rd scarts.

Note: 3rd. Scart is optional.

Language: You can select one of the 10 languages by pressing OK button in the language selection.

Timer: Use **Program up** and **down** buttons to select **Timer** in the features menu. Using the Timer function, you can switch to a specific programme at a pre-programmed time or you can turn your TV off at the time you want your TV to be turned off.

Press OK to access the **Timer** menu.

Clock: Use the numeric buttons to set the real time.

On Time: Use the numeric buttons to set the time that you want your TV to be turned on (TV should be on stand-by mode).

Off Time: Use the numeric buttons to set the time that you want your TV to be turned off (Stand-by mode).

Program No: Use the numeric buttons to set the programme number that will be shown when you set the **On Time**.

Picture format

You can adjust the picture format of your TV according to the program format you are watching. Press the “16:9” button to change the Picture format.

Available formats are 16:9, 14:9, 4:3, Letterbox, Subtitle1, Subtitle2 (Optional).

16:9 and **14:9** are the screen formats of widescreen TV sets (28” SF/PF, 32” SF/PF). The TV will automatically switch to this format if it detects 16:9 format from the SCART inputs.

16:9 Colour television

4:3 TV picture format.

14:9 TV picture format.

16:9 TV picture format.

4:3 Colour television

L Box (Letter box), Useful for watching video, some film formats and Pal-Plus format.

Subtitle1: If you can not see subtitles at the bottom of the screen, especially when watching 4:3 pictures in Letter box format, select Subtitle1.

Subtitle2: When Subtitle1 is not enough, select the picture format as Subtitle2.

Subwoofer (optional)

A sub woofer speaker can be fitted within the TV case as an option depending to the model.

For 33”(84cm) TV sets there is an external subwoofer (optional) to be fixed as shown below.

Select Sound menu and press **Program down** button to access Sound Features menu. Press **Program down** button and select **SUBWOOFER** line.

Press the **Volume up** button to switch the Subwoofer on or off.

Note: If your TV has Subwoofer and if you turn on the Dynamic Bass, the subwoofer will also automatically turn on. You can not turn your subwoofer off when Dynamic Bass is on.

Setup menu (blue button)

Program table menu (yellow button)

These two menus are explained under “Tuning the TV” and “Program Organising”.

OTHER FEATURES

Picture freeze

When you press "FREEZE" key on your remote control, the picture on the screen becomes fixed. To get out of the position, press the same key again.

Picture scan (Optional)

You can scan the programmes starting from the current programme you have been watching, on the screen within twelve frames. Press "SCAN" key on your command for this.

To view the desired one from these programmes, press "OK" during scanning. The programme you chose will appear on the screen. To exit, press "SCAN" key.

Blank programmes will not be scanned.

Zoom Function (Optional)

Pressing OK button zooms in to the picture. Zoom function is performed towards the center of the picture.

There are 3 steps Zoom, each time you press the OK button.

ZOOM1, ZOOM2, ZOOM3.

You can also scroll on the picture by pressing **Program up** or **down** and **Volume up** and **down** buttons.

PAT (Picture and Text)

In the double window function, you can also display the teletext screen in the second window. Press the  button to see the PAT mode. To exit the PAT mode press the TV/TXT button and return to the main screen.

Using Teletext

Teletext is an information system that displays text on your TV screen. Using the teletext control buttons you can view pages of information that are listed in the teletext index.

Please Note

No on screen display is available in text mode. The contrast, brightness and colour cannot be changed but the volume control is still available.

To enter Text mode

Please Note

Make sure the TV channel you are watching transmits teletext.

Press the **TV/TEXT** button. The text page will appear, normally the index page.

To exit Text mode

Press the **TV/TXT** button. The TV will return to the channel you were watching.

To select a page of text

Find the number of the page in the index and enter it using the **Numeric** buttons. The number of the page will appear in the top left hand corner of the screen.

The page counter will search for your page. When it finds it, the page will be displayed.

To move to the next page of text press the **Program up** button.

To move to the previous page press the **Program down** button.

To return to the index page press the **P100** button.

TV/text mix

To view a page of text whilst watching a TV programme press the **MIX** button. The text will be superimposed over the TV programme.

Press the **MIX** button again to return to the text page.

Page search whilst watching TV

In Text mode press the Update button. The TV will return to TV mode with the text page number in the top left hand corner of the screen.

Enter the page number you want using the **Numeric** buttons.

The top line of the text page will appear whilst the text searches for your page. When the page is found the number will remain in the top left hand corner of the screen.

Press the **Update** button to view your selected page of text.

Double height text

If you have difficulty reading the text on the TV you can double the height of the text.

Press the **Double height** button. The top half of the page will be displayed in double height text.

Press the **Double height** button again. The bottom half of the page will be displayed in double height text.

Press the **Double height** button again to return to the full page.

Page Stop

If the page of text you have selected contains sub pages, these sub pages will automatically be displayed in order with a delay to allow you to read the page.

To stop the move to the next sub page press the **HOLD** button. STOP will appear in the top left hand corner.

To continue moving through the sub pages press the **HOLD** button again.

To select a sub page

If the page of text you are viewing contains sub pages, the number of the sub page you are on and the total number of sub pages is displayed on the right of the screen i.e. 1/7.

To select a sub page press the **SUB** button. The number in the top left hand corner will be replaced by S followed by 4 asterisks.

Enter the number of the sub page, using the **Numeric** buttons in the format S0001 for sub page 1.

The teletext will search for the sub page. This may take some time. To return to the TV whilst the teletext is searching press the **Update** button.

When the page number is found it will appear in the top left hand corner of the screen.

Press the **Update** button again to view the text page.

To reveal information

Press the **Rev** button to reveal concealed information (quiz answers etc.).

Press the **Rev** button again to conceal the information again.

Clock

Press the **Sub** button, whilst watching a TV program, to display the time.

Fast text

At the bottom of the teletext screen is a row of subject headings in red, green yellow and blue.

The remote control has a row of coloured buttons corresponding to the row of coloured subjects on the screen.

Pressing one of the coloured buttons will take you directly to the page corresponding to the subject heading.

Toptext (optional)

At the bottom of the teletext screen is a row of subject headings in yellow and blue. Pressing yellow or blue buttons on the remote control, selects the related Subject. Next page can be selected by pressing the red button and previous page can be selected by pressing the green button.

Note: Fasttext and Toptext features are not available in every program.

Connecting external equipment

You can connect a wide range of audio and video equipment to your TV.

Connecting a video recorder

Via SCART

Make sure the TV and video recorder are both switched off.

Plug one end of the SCART lead (not supplied) into the back of the video recorder and the other end into one of the SCART sockets on the back of the TV.

Switch on the video recorder and the TV.

Press the **AV** button on the remote control to select AV1, AV2 or AV3 (optional) to correspond with SCART socket you are using on the back of the TV.

Please note:

You can connect a RGB external equipment via Scart 3 (optional) or Scart 1. It is necessary to you use full Scart cable for this purpose.

Select the video outputs of external device by using its menu to RGB if it's available.

Via RCA lead (optional)

Make sure the TV and video recorder are both switched off.

Plug one end of the RCA lead into the video and audio out sockets on the back of the video recorder and plug the other end into the video and audio in sockets of the TV.

If the sound is in mono use the Audio Input L. In the **SOUND** menu select **MONO**.

Press the **AV** button repetitively and select the AV3 (AV4 optional) mode.

Please note:

When using RCA lead, you should select AV4 in 3 Scart models and AV3 in 2 Scart models.

③ Via aerial socket

Make sure the TV and video recorder are both switched off.

Unplug the aerial lead from the TV and plug it into the aerial socket on the video recorder (if fitted).

Plug a coaxial plug into the RF out socket on the rear of the video recorder and plug the other end into the aerial socket of the TV.

Switch on the video recorder and the TV.

If your video recorder has a test signal, switch it on. (Refer to the video recorder user guide).

See 'Tuning the TV' and carry out the tuning procedure for the video recorder test signal. Select a programme number 0.

④ S-Video Player

If you have an S-Video player you can connect it to SCART socket 3 (optional) via an adaptor from scart to S-Video/RCA audio (not supplied).

Press the AV button repetitively to select AV3-S.(3 scart models only)

⑤ Via RCA lead and S-Video socket

You can also connect it through the S-Video socket of the TV.

Plug the S-Video plug into the S-Video socket and the audio leads into the audio sockets.

Press the AV button repetitively to select AV3-S or AV4-S (optional).

Connecting a DVD player

❶ Via SCART

Make sure the TV and DVD player are both switched off.

Plug one end of the SCART lead (not supplied) into the back of the DVD player and the other end into one of the SCART sockets on the back of the TV.

Switch on the DVD and the TV.

Press the AV button on the remote control to select AV1, AV2 or AV3 correspond with SCART socket you are using on the back of the TV.

Note: Scart 1 and Scart 3 (optional) will give you RGB picture quality. For DVD connections RGB capable scart sockets (AV1 or AV3) are recommended.

❷ Via RCA lead (optional)

Make sure the TV and DVD player are both switched off.

Plug one end of the RCA lead into the video and audio out sockets on the back of the DVD player and plug the other end into the video and audio in sockets of the TV.

Press the AV button repetitively and select the AV3 (AV4 optional) mode.

❸ Via RCA lead and S-Video socket

You can also connect it through the S-Video socket of the TV.

Plug the S-Video plug into the S-Video socket and the audio leads into the audio sockets.

Press the AV button repetitively to select AV3-S or AV4-S (optional).

Connecting a decoder

Via SCART

Make sure the TV and decoder are both switched off.

Plug one end of the SCART lead (not supplied) into the back of the decoder and the other end into the SCART 1 on the back of the TV.

Switch on the decoder and the TV.

Press the **AV** button on the remote control to select AV1.

2 Via RCA lead

Make sure the TV and decoder are both switched off.

Note: For Decoder connection Via RCA lead your Decoder device should have the tuner built in.

Plug one end of the RCA lead into the video and audio out sockets on the back of the decoder and plug the other end into the video and audio in sockets on the TV.

Press the **AV** button repetitively and select the AV3 mode (AV4 optional).

Please Note

You can record from one external device to another via scart sockets. You should select the source and destination of video using FEATURES menu. If you select the source as AV3/AV3-S or AV4/AV4-S (optional) you will have a "WARNING: COPY FUNCTION ACTIVE" message on the screen. You will not have picture at AV4/AV4-S if you select source AV3/AV3-S or vice versa.

You can connect NTSC supported equipment to the TV via the SCART sockets and adjusting the colour via the PICTURE menu.

Select TINT by using **Program down** button and use to adjust the colour.

Volume up and **down** buttons.

Help and service tips

The TV does not work

Make sure it is plugged into the mains supply and switched on.

Poor picture

- Is the aerial plugged in?
- If you are using a set top aerial is it properly aligned for the best signal.
- Make sure the aerial is not too close to neon lights, loudspeakers etc.
- Try changing the direction of the outdoor aerial. High buildings and mountains can cause ghost pictures or double images.
- The picture quality may be reduced by connecting two external sources at once. Disconnect one of the sources.
- Adjust the fine tuning.

No picture

- Is the aerial plugged in properly?
- Is the aerial lead damaged?
- Are all the plugs in the aerial lead fitted correctly?
- Have you pressed the correct buttons on the remote control?

No sound

- Is the sound muted? Press the Mute button.
- Is the volume turned down?
- Are there headphones connected?

Sound coming from only one speaker

- Is the balance set to one side? See the sound menu.
- If you have external speakers, has one of them become disconnected.

No response to the remote control

- Try changing the batteries.
- Is there an obstruction between the remote control and the sensor on the TV.

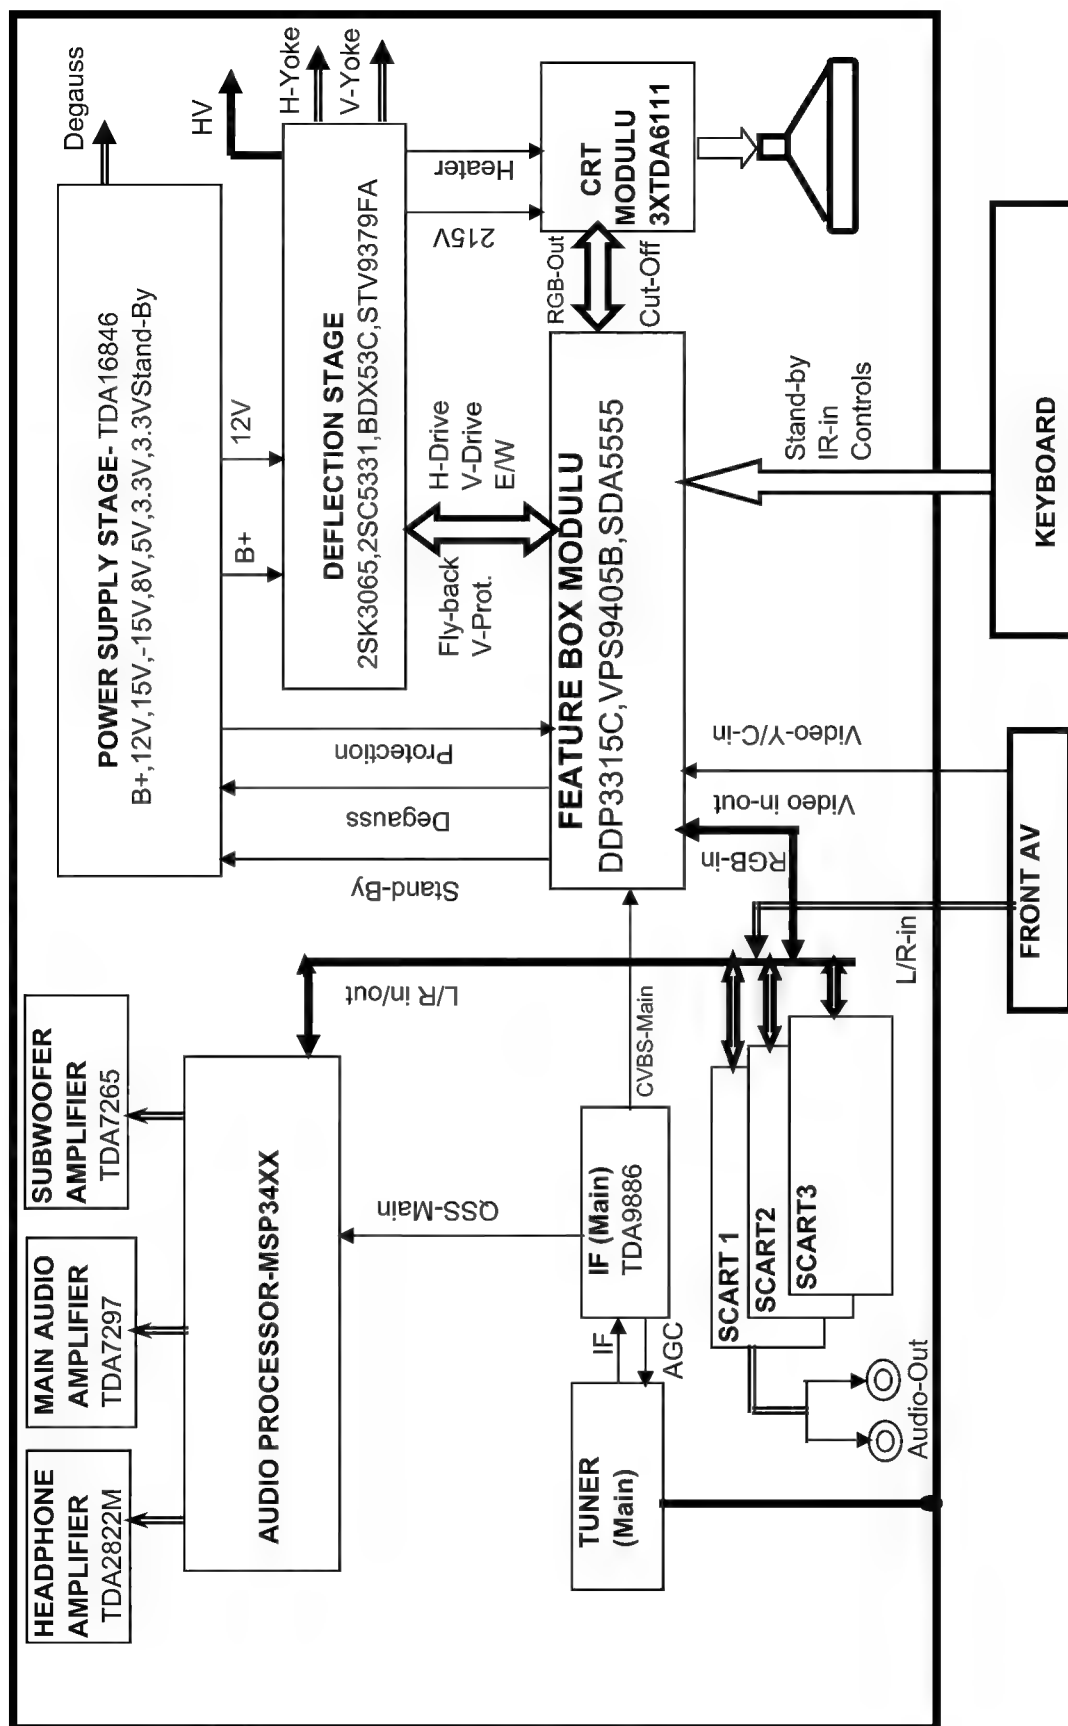

If nothing works

If you have tried the above solutions and none seem to work, try switching the unit off and on again.

If this does not work contact your supplier or TV repair technician. Never attempt to repair a defective TV yourself.

Symptoms	Solutions											
	Check if on/off switch is "on"	Try a different channel, if OK, probably station trouble	Check aerial connections on back of set	Check aerial for broken wires	Re-orientate aerial	Probably local interference, such as an appliance	Adjust fine tuning control	Adjust brightness control	Adjust contrast control	Check if station is broadcasting colour	Adjust colour control	Check batteries in the remote control handset.

22.2 CHASSIS BLOCK DIAGRAM

74LVC04A

Hex Inverter

FEATURES

- 5 V tolerant inputs for interfacing with 5 V logic
- Wide supply voltage range from 1.2 to 3.6 V
- CMOS low power consumption
- Direct interface with TTL levels
- Inputs accept voltages up to 5.5 V
- Complies with JEDEC standard no. 8-1A
- Specified from -40 to $+85$ °C and -40 to $+125$ °C.

Pin configuration.

DESCRIPTION

The 74LVC04A is a high-performance, low-power, low-voltage, Si-gate CMOS device, superior to most advanced CMOS compatible TTL families.

Inputs can be driven from either 3.3 or 5 V devices. This feature allows the use of these devices as translators in a mixed 3.3 and 5 V environment.

The 74LVC04A provides six inverting buffers.

Logic symbol.

FAN117A

Features

- Low dropout voltage
- Load regulation: 0.05% typical
- Trimmed current limit
- On-chip thermal limiting
- Standard SOT-223, TO-220, and TO-252 packages
- Three-terminal adjustable or fixed 1.8V, 2.5V, 2.85V, 3.3V, 5V

Applications

- Active SCSI terminators
- High efficiency linear regulators
- Post regulators for switching supplies
- Battery chargers
- 12V to 5V linear regulators
- Motherboard clock supplies

1A Adjustable/Fixed Low Dropout Linear Regulator

Description

The FAN117A and FAN117A-1.8, -2.5, -2.85, -3.3 and -5 are low dropout three-terminal regulators with 1A output current capability. These devices have been optimized for low voltage where transient response and minimum input voltage are critical. The 2.85V version is designed specifically to be used in Active Terminators for SCSI bus.

Current limit is trimmed to ensure specified output current and controlled short-circuit current. On-chip thermal limiting provides protection against any combination of overload and ambient temperatures that would create excessive junction temperatures.

Unlike PNP type regulators where up to 10% of the output current is wasted as quiescent current, the quiescent current of the FAN117A flows into the load, increasing efficiency.

The FAN117A series regulators are available in the industry-standard SOT-223, TO-220, and TO-252 (DPAK) power packages.

HY57V641620HG

4 Banks x 1M x 16Bit Synchronous DRAM

FEATURES

- Single 3.3±0.3V power supply
- All device pins are compatible with LVTTTL interface
- JEDEC standard 400mil 54pin TSOP-II with 0.8mm of pin pitch
- All inputs and outputs referenced to positive edge of system clock
- Data mask function by UDQM or LDQM
- Internal four banks operation
- Auto refresh and self refresh
- 4096 refresh cycles / 64ms
- Programmable Burst Length and Burst Type
 - 1, 2, 4, 8 or Full page for Sequential Burst
 - 1, 2, 4 or 8 for Interleave Burst
- Programmable $\overline{\text{CAS}}$ Latency ; 2, 3 Clocks

Pin Description

PIN	PIN NAME	DESCRIPTION
CLK	Clock	The system clock input. All other inputs are registered to the SDRAM on the rising edge of CLK
CKE	Clock Enable	Controls internal clock signal and when deactivated, the SDRAM will be one of the states among power down, suspend or self refresh
$\overline{\text{CS}}$	Chip Select	Enables or disables all inputs except CLK, CKE and DQM
BA0,BA1	Bank Address	Selects bank to be activated during RAS activity Selects bank to be read/written during $\overline{\text{CAS}}$ activity
A0 ~ A11	Address	Row Address : RA0 ~ RA11, Column Address : CA0 ~ CA7 Auto-precharge flag : A10
$\overline{\text{RAS}}$, $\overline{\text{CAS}}$, $\overline{\text{WE}}$	Row Address Strobe, Column Address Strobe, Write Enable	$\overline{\text{RAS}}$, $\overline{\text{CAS}}$ and $\overline{\text{WE}}$ define the operation Refer function truth table for details
LDQM, UDQM	Data Input/Output Mask	Controls output buffers in read mode and masks input data in write mode
DQ0 ~ DQ15	Data Input/Output	Multiplexed data input / output pin
VDD/VSS	Power Supply/Ground	Power supply for internal circuits and input buffers
VDDQ/VSSQ	Data Output Power/Ground	Power supply for output buffers
NC	No Connection	No connection

Pin Configuration

LD 1086

1.5A Low Drop Fixed And Adjustable Positive Voltage Regulators

- TYPICAL DROPOUT VOLTAGE 1.3V AT 1.5A
- THREE TERMINAL ADJUSTABLE OR FIXED OUTPUT VOLTAGE 1.8V, 2.5V, 2.85V, 3.3V, 3.6V, 5V, 8V, 9V, 12V
- GUARANTEED OUTPUT CURRENT UP TO 1.5A
- OUTPUT TOLERANCE $\pm 1\%$ AT 25°C AND $\pm 2\%$ IN FULL TEMPERATURE RANGE
- INTERNAL POWER AND THERMAL LIMIT
- WIDE OPERATING TEMPERATURE RANGE -40°C TO 125°C
- PACKAGE AVAILABLE: TO-220, D²PAK, D²PAK/A, DPAK
- PINOUT COMPATIBILITY WITH STANDARD ADJUSTABLE VOLTAGE REGULATORS

DESCRIPTION

The LD1086 is a LOW DROP Voltage Regulator able to provide up to 1.5A of Output Current. Dropout is guaranteed at a maximum of 1.5V at the maximum output current, decreasing at lower loads. The LD1086 is a pin compatible with older 3-terminal adjustable regulators, but has better performances in term of drop and output tolerance. A 2.85V output version is suitable for SCSI-2 active termination. Unlike PNP regulators, where a part of the output

current is wasted as quiescent current, the LD1086 quiescent current flow into the load, so increase efficiency. Only a 10 μ F minimum capacitor is needed for stability.

NCP1117

1.0A Low-Dropout Positive Fixed And Adjustable Voltage Regulators

The NCP1117 series are low dropout positive voltage regulators that are capable of providing an output current that is in excess of 1.0 A with a maximum dropout voltage of 1.2 V at 800 mA over temperature. This series contains eight fixed output voltages of 1.5 V, 1.8 V, 2.0 V, 2.5 V, 2.85 V, 3.3 V, 5.0 V, and 12 V that have no minimum load requirement to maintain regulation. Also included is an adjustable output version that can be programmed from 1.25 V to 18.8 V with two external resistors. On chip trimming adjusts the reference/output voltage to within $\pm 1.0\%$ accuracy. Internal protection features consist of output current limiting, safe operating area compensation, and thermal shutdown. The NCP1117 series can operate with up to 20 V input. Devices are available in SOT-223 and DPAK packages.

Features

- Output Current in Excess of 1.0 A
- 1.2 V Maximum Dropout Voltage at 800 mA Over Temperature
- Fixed Output Voltages of 1.5 V, 1.8 V, 2.0 V, 2.5 V, 2.85 V, 3.3 V, 5.0 V, and 12 V
- Adjustable Output Voltage Option
- No Minimum Load Requirement for Fixed Voltage Output Devices
- Reference/Output Voltage Trimmed to $\pm 1.0\%$
- Current Limit, Safe Operating and Thermal Shutdown Protection
- Operation to 20 V Input

Applications

- Consumer and Industrial Equipment Point of Regulation
- Active SCSI Termination for 2.85 V Version
- Switching Power Supply Post Regulation
- Hard Drive Controllers
- Battery Chargers

(Top View)

- Pin: 1. Adjust/Ground
2. Output

TDA6111Q

Video Output Amplifier

FEATURES

- High bandwidth and high slew rate
- Black-current measurement output for Automatic Black-current Stabilization (ABS)
- Two cathode outputs; one for DC currents, and one for transient currents
- A feedback output separated from the cathode outputs
- Internal protection against positive appearing Cathode-Ray Tube (CRT) flashover discharges
- ESD protection
- Simple application with a variety of colour decoders
- Differential input with a designed maximum common mode input capacitance of 3 pF, a maximum differential mode input capacitance of 0.5 pF and a differential input voltage temperature drift of 50 $\mu\text{V/K}$
- Defined switch-off behaviour.

PINNING

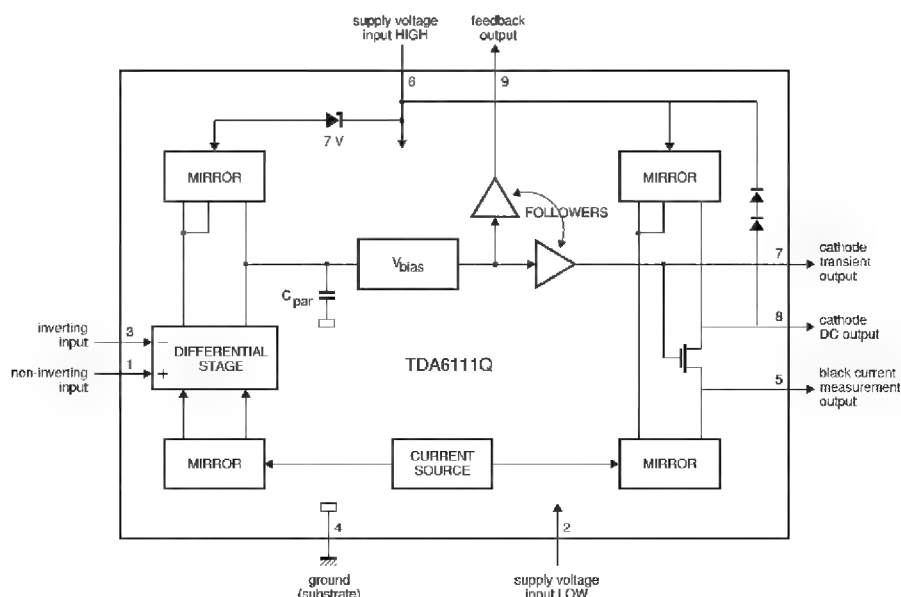

SYMBOL	PIN	DESCRIPTION
V_{ip}	1	non-inverting voltage input
V_{DDL}	2	supply voltage LOW
V_{in}	3	inverting voltage input
GND	4	ground, substrate
I_{om}	5	black current measurement output
V_{DDH}	6	supply voltage HIGH
V_{cn}	7	cathode transient voltage output
V_{oc}	8	cathode DC voltage output
V_{fb}	9	feedback voltage output

GENERAL DESCRIPTION

The TDA6111Q is a video output amplifier with 16 MHz bandwidth. The device is contained in a single in-line 9-pin medium power (DBS9MPF) package, using high-voltage DMOS technology, intended to drive the cathode of a colour CRT.

Pin configuration.

DDP 3315C

Display and Deflection Processor

Introduction

The DDP 3315C is a mixed-signal single-chip digital display and deflection processor, designed for high-quality backend applications in double scan and HDTV TV sets with 4:3 or 16:9 picture tubes. The interfaces qualify the IC to be combined with state of the art digital scan rate converters, as well as analog HDTV sources. The DDP 3315C contains the entire digital video component, deflection processing, and all analog interfaces to display the picture on a CRT. The main features are

Video Processing

- linear horizontal scaling (0.25 ... 4), as well as nonlinear horizontal scaling "panorama vision"
- dynamic black level expander
- luma sharpness enhancement by dynamic peaking and luma transient improvement (LTI)
- color transient improvement (CTI)
- programmable RGB matrix
- black stretch, blue stretch, gamma correction via programmable Non-linear Colorspace Enhancer (NCE) on RGB
- two analog double scan inputs with fast blank (one RGB and one RGB/YC_rC_b/YP_rP_b selectable)

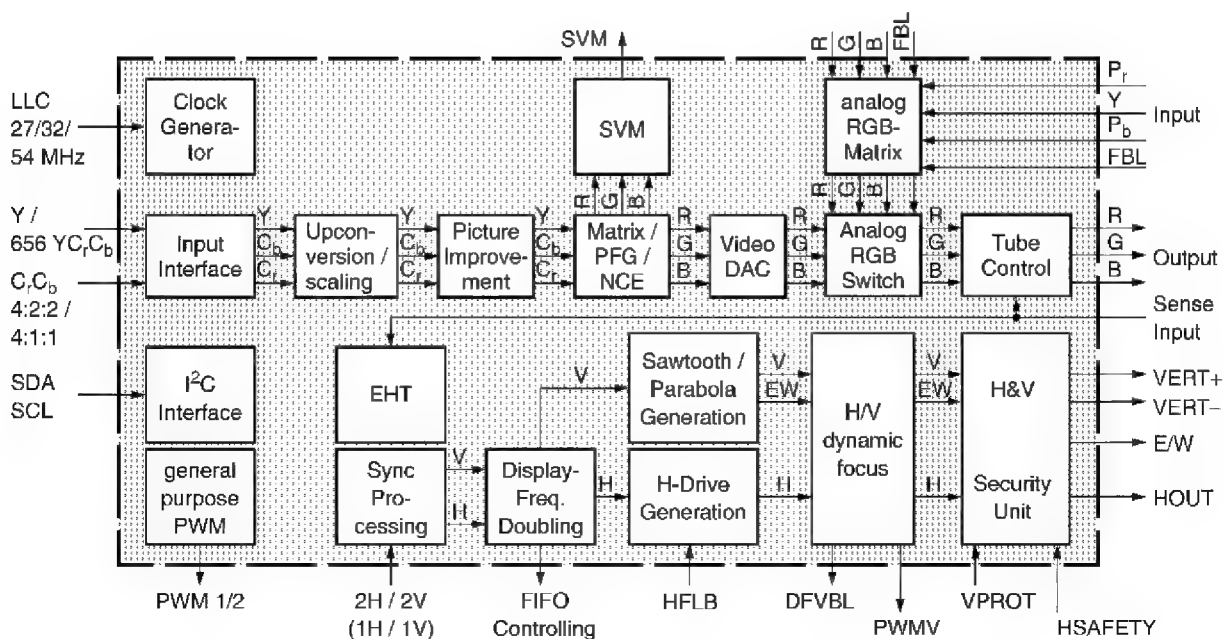

- average and peak beam current limiter
- automatic picture tube adjustment (cutoff, drive)

Deflection Processing

- scan velocity modulation output
- digital EHT compensation for vertical / east-west
- vertical angle and bow correction
- differential vertical outputs
- vertical zoom via deflection adjustment
- horizontal and vertical protection circuit
- horizontal frequency for VGA/SVGA/1080i
- black switch off procedure
- supports horizontal and vertical dynamic focus

Miscellaneous

- selectable ITU-R 601 4:1:1 / 4:2:2 YC_rC_b input at 27/32 MHz or double scan ITU-R 656 input at 54 MHz line-locked clock
- crystal oscillator for horizontal safety
- picture frame generator
- hardware for simple 50/60 Hz to 100/120 Hz conversion (display frequency doubling)
- PQFP80 package, 5 V analog and 3.3 V digital supply

VSP 94x7B

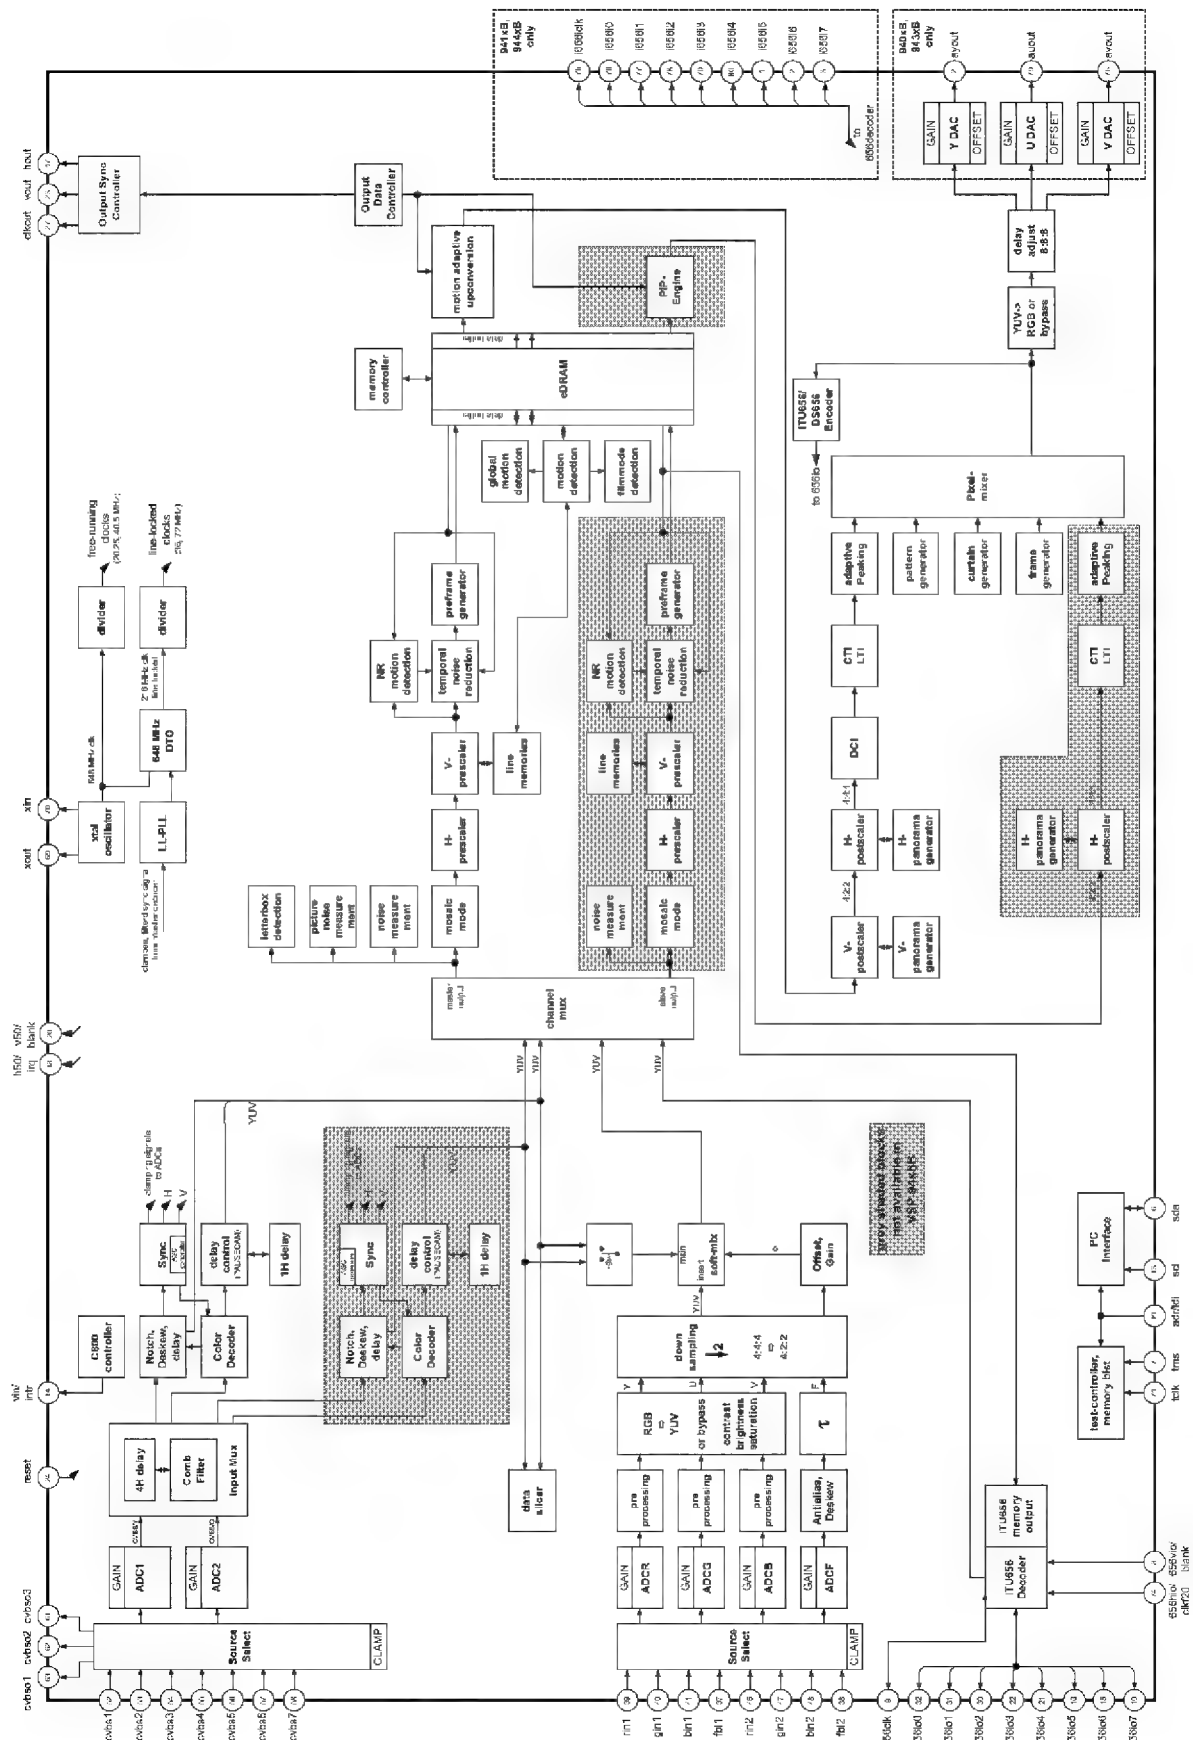

General Description

The VSP 94xxB (OPTIMUS) is a new component of the Micronas MEGAVISION® single-chip-IC family. The VSP 94xxB family comprises all main functions of a digital featurebox in one monolithic IC. The amount of features is splitted up to different levels from mid to high end, always giving highest picture quality. The family is ideally suited to work in conjunction with the deflection processors SDA 9380, DDP3310B or DDP3315C (dependent on 94xxB version). In combination with the 'digital TV decoder' MDE 9500 double-scan IDTV are possible. 50/60Hz derivatives are also available. The device comprises digital multistandard color decoder for master and slave channel, a RGB interface with fast-blank capability (SCART), scaling units including panorama, embedded DRAM for upconversion, high performance frame based upconversion algorithms, picture improvements, temporal noise reduction as well as A/D and D/A converter.

Features

- **Different Application modes**
 - FSM: frame based high performance master with PiP
 - SSC: Split screen ('Double Window')
 - MUP: Multi pictures, several still and 2 live pictures possible
 - PC: PC signal in combination with TV signal (TV in PC or PC in TV)
- **Data Acquisition connectivity**
 - Up to seven (9425B/9427B: nine) CVBS inputs, up to two Y/C inputs,
 - Up to three CVBS outputs (even when Y/C input)
 - ITU-R 656 compatible digital input
 - RGB/FBL or YUV or YUV-H-V input
 - 9 bit amplitude resolution for CVBS/Y/C A/D converter
 - 8 bit amplitude resolution for RGB/FBL A/D converter
- **Multi-standard color decoder with 4H comb-filter**
 - PAL/NTSC/SECAM including all substandards
 - Automatic recognition of chroma standard
 - AGC (Automatic Gain Control)
- **Second Multi-standard color decoder for slave channel (94x7B only)**
- **Processing of two input channels independently: master and slave channel**
- **Motion adaptive temporal noise reduction for master and slave channel**
 - Field or frame based temporal noise reduction for luminance and chrominance
- **Pre-Scaling of the 1f_H signal (master and slave channel)**
 - horizontal scaling factors: 1.5...[2 pixel resolution]...1/28
 - vertical scaling factors: 1...[1 line resolution]...1/30
- **Horizontal and vertical scaling of the 2f_H signal (master and slave channel)**
 - Horizontal Scaling factors: 3...[2 pixel resolution]...0.75
 - 5 zone horizontal panorama generator
- **Vertical scaling of the 2f_H signal (master channel)**
 - Vertical Scaling factors: 0.92...[2 line resolution]...8
 - 5 zone vertical panorama generator
- **Detection circuits**
 - Global motion and global still detection
 - Film mode and phase detection (PAL, NTSC; 2-2, 3-2 pull down)
 - measurement of the noise level (blanking)
 - measurement of the noise level (inside active picture)
 - detection of letter box formats
- **Embedded memory**
 - On-chip memory controller
 - Embedded DRAM core for field memory
 - SRAM for delay lines
- **Data format 4:2:2**
- **Read or write of memory content via 656 interface**
- **Data slicer for closed caption ('V-chip') and WSS**
- **Flexible clock and synchronization concept**
 - Horizontal line-locked or free-running mode
 - Vertical locked or free-running mode
- **Scan-rate-conversion (version dependent)**
 - Motion adaptive frame based 100/120 Hz interlaced scan rate conversion
 - Motion adaptive frame based 50/60 Hz progressive scan rate conversion
 - Special treatment for film material ('Inverse 3-2 pull down')
 - Large area and line flicker reduction
 - Simple progressive modes: AB, AA*
 - Simple interlaced modes (100/120 Hz): ABAB, AABB, AAAA, BBBB
 - No scan-rate-conversion modes (50/60 Hz): AB, AA, BB
- **Signal manipulations**
 - Still field or still frame
 - Insertion of colored background
 - 2D and 3D frames for master and slave channel
 - Snapshot
 - Windowing
 - Temporal overblending between master and slave
 - Vertical chrominance shift for improved VCR picture quality
 - Mosaic-mode generator
 - Test pattern generator
 - Demo mode
- **Sharpness improvement**
 - Digital color transition improvement (DCTI)
 - Adaptive horizontal and vertical Peaking (luminance)
 - Digital luminance transition improvement (DLTI)
 - Digital contrast improvement (DCI, master channel only)
- **(S) VGA support**
 - synchronization to external (S)VGA source possible
 - scaling of VGA picture, including TV picture and VGA display 'side-by-side'
- **Three D/A converters**
 - 9 bit amplitude resolution for YUV, RGB output
 - (nominal) 72 MHz clock frequency with two-fold oversampling
- **Digital output (version dependent)**
 - 4:4:4 YUV or RGB output with 24 or 27 bit
 - 4:2:2 YUV output with 24 or 27 bit
 - 2f_H-8bit (656 like) digital output
 - ITU-R 656 compatible digital output
- **I²C-bus control (400 kHz)**
- **1.8V± 5% and 3.3V ± 5% supply voltages**
- **P-MQFP-80 or P-MQFP-144 package**
- **Only one crystal necessary for whole IC and all color standards**

TDA 7265

25+25 W Amplifier with Mute and Stand-by

- WIDE SUPPLY VOLTAGE RANGE (UP TO $\pm 25V$ ABS MAX.)
- SPLIT SUPPLY
- HIGH OUTPUT POWER
25 + 25W @ THD = 10%, $R_L = 8\Omega$, $V_S = \pm 20V$
- NO POP AT TURN-ON/OFF
- MUTE (POP FREE)
- STAND-BY FEATURE (LOW I_q)
- SHORT CIRCUIT PROTECTION
- THERMAL OVERLOAD PROTECTION

DESCRIPTION

The TDA7265 is class AB dual Audio power amplifier assembled in the Multiwatt package, specially designed for high quality sound application as Hi-Fi music centers and stereo TV sets.

PIN CONNECTION

TDA 7297

15+15W Dual Bridge Amplifier

- WIDE SUPPLY VOLTAGE RANGE (6V -18V)
- MINIMUM EXTERNAL COMPONENTS
 - NO SWR CAPACITOR
 - NO BOOTSTRAP
 - NO BOUCHEROT CELLS
 - INTERNALLY FIXED GAIN
- STAND-BY & MUTE FUNCTIONS
- SHORT CIRCUIT PROTECTION
- THERMAL OVERLOAD PROTECTION

TDA9886

FEATURES

- 5 V supply voltage
- Gain controlled wide-band Vision Intermediate Frequency (VIF) amplifier, AC-coupled
- Multistandard true synchronous demodulation with active carrier regeneration: very linear demodulation, good intermodulation figures, reduced harmonics, and excellent pulse response
- Gated phase detector for L and L-accent standard
- Fully integrated VIF Voltage Controlled Oscillator (VCO), alignment-free, frequencies switchable for all negative and positive modulated standards via I²C-bus
- Digital acquisition help, VIF frequencies of 33.4, 33.9, 38.0, 38.9, 45.75, and 58.75 MHz
- 4 MHz reference frequency input: signal from Phase-Locked Loop (PLL) tuning system or operating as crystal oscillator
- VIF Automatic Gain Control (AGC) detector for gain control, operating as peak sync detector for negative modulated signals and as a peak white detector for positive modulated signals
- External AGC setting via pin OP1
- Precise fully digital Automatic Frequency Control (AFC) detector with 4-bit digital-to-analog converter, AFC bits readable via I²C-bus
- TakeOver Point (TOP) adjustable via I²C-bus or alternatively with potentiometer
- Fully integrated sound carrier trap for 4.5, 5.5, 6.0, and 6.5 MHz, controlled by FM-PLL oscillator
- Sound IF (SIF) input for single reference Quasi Split Sound (QSS) mode, PLL controlled

FUNCTIONAL DESCRIPTION

1. VIF amplifier
2. Tuner AGC and VIF-AGC
3. VIF-AGC detector
4. Frequency Phase-Locked Loop (FPLL) detector
5. VCO and divider
6. AFC and digital acquisition help
7. Video demodulator and amplifier
8. Sound carrier trap
9. SIF amplifier
10. SIF-AGC detector
11. Single reference QSS mixer
12. AM demodulator
13. FM demodulator and acquisition help
14. Audio amplifier and mute time constant
15. Internal voltage stabilizer
16. I²C-bus transceiver and MAD (module address).

I²C- Bus controlled single and multistandard Alignment-free IF-PLL demodulators

- SIF-AGC for gain controlled SIF amplifier, single reference QSS mixer able to operate in high performance single reference QSS mode and in intercarrier mode, switchable via I²C-bus
- AM demodulator without extra reference circuit
- Alignment-free selective FM-PLL demodulator with high linearity and low noise
- I²C-bus control for all functions
- I²C-bus transceiver with pin programmable Module Address (MAD)
- Four I²C-bus addresses via MAD.

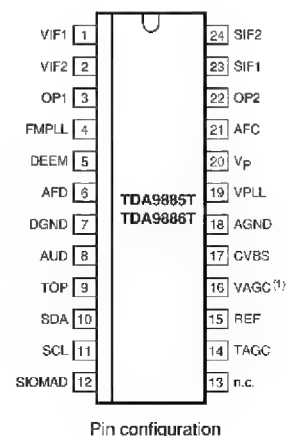

2 GENERAL DESCRIPTION

The TDA9885 is an alignment-free multistandard (PAL and NTSC) vision and sound IF signal PLL demodulator for negative modulation only and FM processing.

The TDA9886 is an alignment-free multistandard (PAL, SECAM and NTSC) vision and sound IF signal PLL demodulator for positive and negative modulation, including sound AM and FM processing.

3 APPLICATIONS

- TV, VTR, PC and STB applications.

TDA9886

Block diagram.

TDA9886

SYMBOL	PIN	DESCRIPTION
	TDA9886T TDA9886TS	
VIF1	1	VIF differential input 1
VIF2	2	VIF differential input 2
n.c.	–	not connected
OP1	3	output port 1; open-collector
FMPLL	4	FM-PLL for loop filter
DEEM	5	de-emphasis output for capacitor
AFD	6	AF decoupling input for capacitor
DGND	7	digital ground
n.c.	–	not connected
AUD	8	audio output
TOP	9	tuner AGC TakeOver Point (TOP) for resistor adjustment
SDA	10	I ² C-bus data input and output
SCL	11	I ² C-bus clock input
SIOMAD	12	sound intercarrier output and MAD select with resistor
n.c.	–	not connected
n.c.	13	not connected
n.c.	–	not connected
TAGC	14	tuner AGC output
REF	15	4 MHz crystal or reference signal input
VAGC	16	VIF-AGC for capacitor
n.c.	–	not connected
CVBS	17	composite video output
n.c.	–	not connected
AGND	18	analog ground
VPLL	19	VIF-PLL for loop filter
V _P	20	supply voltage
AFC	21	AFC output
OP2	22	output port 2; open-collector
n.c.	–	not connected
SIF1	23	SIF differential input 1 and MAD select with resistor
SIF2	24	SIF differential input 2 and MAD select with resistor
n.c.	–	not connected
n.c.	–	not connected

1. ELECTRICAL ADJUSTMENTS

1.1 Supply Voltage Adjustment

Connect a digital voltmeter to the cathode of diode D607 at the AV mode of the TV and set the screen voltage to the minimum with the screen potentiometer. Adjust the main supply voltage (B+) with P601 potentiometer to the following value. (After supply adjustment , readjust Screen and focus voltage)

- 28" : 145 VDC (For A66EAK071X44)
- 29" Pure Flat : 130 VDC (For A68QCP891X232)
- 32" 16:9 Pure Flat : 125 VDC (For W76EKW10X71)
- 33" : 145 VDC (For A80AEJ10X522)

2. SERVICE ADJUSTMENTS

2.1 Video Adjustment

- Apply a signal with FUBK or Philips test pattern.
- Enter the service menu with the service remote control or with the user R/C (When main menu appears, enter " 9301")
- Select "VIDEO ADJ. I " and " VIDEO ADJ. II " options.
- Adjust BCL GAIN, BCL TRESHOLD , BCL TRESHOLD 16:9, BCL TIME CONSTANT1, BCL TIME CONSTANT2, OSD BRIGTHNESS, OSD CONTRAST, TXT BRIGTHNESS, TXT CONTRAST, PAT CONTRAST, PWL, SVM DELAY, DPWL GAIN, DPWL SP to the following values which are given in Table 1.
- Adjust the values of YC DELAY FOR PAL , YC DELAY FOR SECAM, YC DELAY FOR NTSC to " 0" .
- Adjust " SUBCARRIER ADJ." to the level where colour bar is pure.

NOTE 1 : Do not enter any value to EEPROM EDIT, PRESET titles.

- PRESET title is used get back to the factory mode adjustmenst if it is necessary.
- EEPROM EDIT is used to send the data to any adress in the Eeprom or to read the data from the Eeprom.
- Exit from the service menu with the service R/C or with the user R/C (with TV/TXT button on the R/C).

2.2 Screen Adjustment

- Enter the service menu with the service remote control or with the user R/C (When main menu is selected, enter " 9301")
- Select the "VIDEO ADJUSTMENT I " menu.
- Find the SCREEN ADJUSTMENT option with P+/P- button and adjust it to " 0 " with V+/V- button.
- Press " OK" button from the service R/C or the user R/C. At the momet, the screen will be black and a line will be visiable in the middle of the screen.
- Adjust the screen potentiometer to the level where the screen is just black and the line is just visiable)
- By pressing "OK" button , the picture will appear again. (Screen is switched to Off)
- Exit from the service menu with the service R/C or with the user R/C (with TV/TXT button on the R/C).

2.3 SVM (Scan Velocity Modulation) Adjustment

It increases the sharpness on transients from black to white and visa versa. IC internally detects the transients and generates a signal at output pin 41 and after amplifying via transistors, the SVM current is generated and flows through SVM coil and modifies the scan velocity in the region.

2.3.1 The Version with SVM Option in the User Menu

- Remove the cable is connected to connector X804 on position.
- Apply a signal with FUBK or Philips test pattern.
- Select the " PICTURE FEATURES " menu.
- Adjust " SVM " to ON. In this case, measure the waveform in the pin 3 of connector X804 with ossilloscope. The minimum voltage of the waveform has to be 1.5 Vpp in the pin 3 of connector X804.

2.3.2 The Version with SVM Option in the Service Menu

- Remove the cable is connected to connector X804 on position.
- Apply a signal with FUBK or Philips test pattern.
- Enter the service menu with the service R/C or the user R/C.
- Select the " OPTIONS " menu.
- Adjust " SVM " to ON.
- While the cable was removed, measure the waveform in the pin 3 of connector X804 with ossilloscope. The minimum voltage of the waveform has to be 1.5 Vpp in the pin 3 of connector X804.

2.4 AGC Adjustment

- Enter the service menu with the service R/C or the user R/C.
- Select the "IF ADJUSTMENT " title.
- Adjust " AGC " to " 15 " and " AGC FOR VHF I " to " 20 " .

2.5 Geometry Adjustment

There are two different Geometry adjustment memories for PAL/SECAM and NTSC systems in this chassis.

- " 100 HZ GEOMETRY I " ve " 100 HZ GEOMETRY II " are used for PAL/SECAM systems.
- " 120 HZ GEOMETRY I " ve " 100 HZ GEOMETRY II " are used for NTSC systems.

NOTE 4: Both PAL and NTSC geometry adjustments must be completed for all of the versions.

2.5.1 PAL / SECAM Geometry Adjustment

- Apply a FUBK or Philips Test Pattern to the antenna input.
- Enter the service menu with the service remote control or with the user R/C (When main menu appears, enter " 9301 ")
- Adjust TILT to " 136 "
- Adjust VERTICAL ZOOM , EHT TRESHOLD , EHT TIME CONSTANT , VERTICAL EHT 1, VERTICAL EHT 2, HORIZONTAL EHT 1 , HORIZONTAL EHT 2, EHT FTC, EHT P1 and EHT P2 to the values which are given **Table 1**.
- Adjust Vertical amplitude with " VERTICAL AMPLITUDE " .
Adjust Vertical position with " VERTICAL SHIFT " .
Adjust Vertical linearity with " LINEARITY " .

Adjust Vertical correction with " S_CORRECTION " .
 Adjust Vertical parallel with " ANGLE " .
 Adjust Vertical curved line with " BOW " .
 Adjust Horizontal position with " HORIZONTAL SHIFT " .
 Adjust Trapeze with " TRAPEZE CORRECTION " .
 Adjust Horizontal general parabola with " CUSHION CORRECTION " .
 Adjust Upper corner parabola with " UPPER CORNER 1 " and " UPPER CORNER 2 " .
 Adjust Lower corner parabola with " LOWER CORNER 1 " and " LOWER CORNER 2 " .
 Adjust Horizontal position of OSD with " HOR.OSD POSITION " .
 Adjust Vertical position of OSD with " VER.OSD POSITION " .
 Adjust Horizontal width with " HORIZONTAL WIDTH " . If the adjustment field is not enough, the value of Horizontal width has to be adjusted to " 255 " . After that, the value of EHT TRESHOLD is decreased and horizontal width adjustment has been completed.

NOTE 2 :

VERTICAL OSD POSITION Adjustment for NTSC mode:

- Do the 120 Hz Geometry adjustments.
- Select the " 120 HZ GEOM. II " menu.
- Adjust " VER. OSD POS." to the value which as half of the header line ("120 HZ GEOM. II ") will be out of the screen.

• Geometry Adjustment of Picture format 4:3 in the tv sets with 16:9 size :

- Apply a FUBK or Philips Test Pattern to the antenna input.
- Enter the service menu with service the remote control or with the user R/C (When main menu appears, enter " 9301 ")
- Select the " 100 HZ GEOMETRY I " menu.
- Adjust Trapeze with " TRAPEZE II " ,
- Adjust Horizontal Parabola with " CUSHION II "
- Adjust Upper corner parabola with " UPPER CORNER 1 II " and " UPPER CORNER 2 II " .
- Adjust Lower corner parabola with " LOWER CORNER 1 II " and " LOWER CORNER 2 II " .

2.5.2 NTSC System Geometry Adjustment

- Apply a NTSC signal to scart 1 (AV1) from a pattern generator with FUBK or Philips test pattern.
- Enter the service menu with service the remote control or with the user R/C (When the main menu appears, enter " 9301 ")
- Select " 120 HZ GEOMETRY I " and " 120 HZ GEOMETRY II " menus.
- NTSC system Geometry adjustments will be done as PAL/SECAM system Geometry adjustments as mentioned above.
- Exit from the service menu with the service R/C or with the user R/C (with TV/TXT button on the R/C).

2.6 Feature Options

- AV3 : NO (SCART 3 is available).
 CVBS/ RGB (Scart 3 is available, Component inputs are not available)
 CVBS/ RGB/ YUV (Scart 3 and Component inputs are available)
- AV4 : NONE (Front AV is not available)
 CVBS + SVHS (Front AV and S-VHS are available)
 CVBS ONLY (Only CVBS is available, S-VHS is not available)
 SVHS ONLY (Only S-VHS is available, Front AV is not available)

TELETEXT	: TEXT (Default) FASTEXT TOPTXT FASTEXT&TOPTXT
MAIN TUNER	: Used to select the Main Tuner. (Philips; Panasonic DB2G3; Panasonic D##01G3; Temic; Panasonic D44G3; Sharp or Alps)
DEGAUSS	: N/A (NOT AVAILABLE) (Degauss is selected from the User menu) 1-30 SECOND (Degauss timer adjustment) NOTE 3 : Degauss title will be adjusted to " 10 second " for all of the tv sets with 32" size. It will be done N/A for all the versions except 32" size.
BG	: EUROPE, NEW ZELAND, AUSTRALIA or NOT AVAILABLE.
DK	: Yes (AVAILABLE) or No (NOT AVAILABLE)
I	: Yes (AVAILABLE) or No (NOT AVAILABLE)
L/L'	: Yes (AVAILABLE) or No (NOT AVAILABLE)
NICAM	: Yes (AVAILABLE) or No (NOT AVAILABLE)
DOLBY VIRTUAL	: Yes (AVAILABLE) or No (NOT AVAILABLE)
SUBWOOFER	: Yes (AVAILABLE) or No (NOT AVAILABLE)
HEADPHONE	: Yes (AVAILABLE) or No (NOT AVAILABLE)
CRT	: 4:3 (For 4:3 CPT) 16:9 (For 16:9 CPT)
SVM	: Scan Velocity Modulation . ON, OFF VIA MENU (SVM can be selected from the User menu) NOTE 4 : This function will be selected " ON " for the tv sets with SVM feature, it will be selected " OFF " for the tv sets without SVM feature.
CURTAIN	: Yes (AVAILABLE) (Blue back function is ON at the interval programs) NO (NOT AVAILABLE)(Blue back function is OFF at the interval programs) NOTE 5 :This function will be selected " YES " for the tv sets with HIGH version and it will be selected " NO " for the tv sets with LOW version.
CARRIER MUTE	: VIA MSP (For other countries) VIA MICRO (For local country)
AM SOUND	: MSP (For the tv sets except tv sets with Secam LL') IF IC (For the tv sets with Secam LL')

STOCK TICK : ENABLE (Shifting Text bar correction is " ON ")
DISABLE (Shifting Text bar correction is " OFF ")

NOTE 6 : This function will be selected " ENABLE " for all the versions.

LTI : ON (Default), OFF
VIA MENU(Luminance Transient Improvement can be selected from the User menu)

CTI : Colour Transient Improvement (ON, OFF)
VIA MENU (Default) (Luminance transient improvement can be selected from the User menu)

PROTECTION : Yes (AVAILABLE) or No (NOT AVAILABLE)

NOTE 7 : This function will be selected "AVAILABLE" at all the versions of tv sets.

PANORAMA : AVAILABLE , NOT AVAILABLE

NOTE 8 : This function is not valid for the tv sets with 4:3 size.

2.7 Factory Settings for Service Mode

1. Values given in Table 1 are typical values and can vary according to the CRT type.

For Philips CRT type (A66EAK071X44 and A66EAK075X44) ;

- Adjust BCL TRESHOLD to " 330 " ,
 - Adjust PWL to " 130 " ,
 - Adjust TEXT BRIGTNES to " -64 " ,
 - Adjust TXT CONTRAST to " 300 " ,
 - Adjust PAT CONTRAST to " 250 "
2. Values given in the below Tables are typical values and can vary according to the CRT type and the frequency. (according to the 100 Hz or 120 Hz) Please see Table 3.
3. PF means Pure Flat and SF means Super Flat.
4. Values given in Table 1, Table 2.1, Table 2.2 and Table 3 can be increased or decreased as 1 by 1, 10 by 10 or 100 by 100 with the service/user Remote Control .
- Vol +/- Vol - keys on the Remote Control are used to increase/decrease 1 by 1,
 - 1 and 3 keys on the Remote Control are used to to increase/decrease 10 by 10,
 - 4 and 6 keys on the Remote Control are used to to increase/decrease 100 by 100,
- values in the below Tables.
